For individuals interested in the evolution of psychological study and its impact on the field.

An authoritative review of foundational research in criminal justice. Forty Studies that Changed Criminal Justice, 2e presents a thorough yet concise summary of the major and influential research studies in the field of criminal justice. Knowledge in criminal justice is developed with research, yet introductory textbooks fail to offer more than cursory synopses of the significant empirical studies that established the foundation of the discipline. This book provides a rich understanding of important research published in each of the three general areas of criminal justice: policing, courts, and corrections. More than a just collection of original published articles, the text is a summary of studies that have shaped the criminal justice system.

Those who have never experienced an abusive or violent relationship often believe that upon finding a way out, victims' difficulties are solved: their life is good, they are safe, and recovery will be swift. However, survivors know that leaving is not the end of the nightmare -- it is the beginning of an often difficult and challenging journey toward healing and happiness. It's My Life Now offers readers the practical guidance, emotional reassurance, and psychological awareness that survivors of relationship abuse and domestic violence need to heal and reclaim their lives after leaving their abusers. Since its publication in 2000, It's My Life Now has been highly successful as a working manual for survivors who are starting their lives over after an abusive relationship. This valuable book combines direction on practical and emotional issues with worksheets and self-exploration exercises. Now, in the second edition, Dugan and Hock include updated information and resources while encompassing a wider range of individuals and the relationships in which abuse and violence occur. The new edition also provides a new emphasis on safety assessment, which has increasingly been shown to be a critical factor in recovery. In addition, this new edition includes current resources and information about organizations for victims along with revised and enhanced strategies to help survivors move forward on the path of recovery.

This book gives readers a systematic look at the process of child psychology by examining the twenty most revolutionary scientific investigations in the field over the course of the last fifty years. The individual chapters are dedicated to each revolutionary study and derived from empirical data and scientific methodology. A four-part organization examines studies that revolutionized cognitive and language development, social development and parenting, clinical child psychology, and how we think about child psychology. For those with a professional or personal interest in child and human development.

It's one of the great mysteries of teaching: Why do some students "get it" and some students don't? In this book, Betty K. Garner focuses on why students struggle and what teachers can do to help them become self-directed learners. Difficulty reading, remembering, paying attention, or following directions are not the reasons students fail but symptoms of the true problem: underdeveloped cognitive structures—the mental processes necessary to connect new information with prior knowledge; organize information into patterns and relationships; formulate rules that make information processing automatic, fast, and predictable; and abstract generalizable principles that allow them to transfer and apply learning. Each chapter focuses on a key cognitive structure and uses real-life accounts to illustrate how learners construct meaning by using recognition, memorization, conservation of constancy, classification, spatial orientation, temporal orientation, and metaphorical thinking. The author's simple techniques stress reflective awareness and visualization. It's by helping students to be conscious of what their senses are telling them, encouraging them to visualize the information for processing, and then prompting them to ask questions and figure out solutions on their own that teachers can best help students develop the tools they need to * Gather, organize, and make sense of information, * Become cognitively engaged and internally motivated to achieve, and * Experience learning as a dynamic process of creating and changing. Suggestions for using these techniques in daily classroom practice, advice on lesson planning for cognitive engagement, and guidelines for conducting reflective research expand this book's practical applications. Use it not only to help struggling students break through hidden barriers but to empower all students with tools that will last a lifetime.

The first comprehensive treatment of stereotypes and stereotyping, this text synthesizes a vast body of social and cognitive research that has emerged over the past-quarter century. Provided is an unusually broad analysis of stereotypes as products both of individual cognitive activities and of social and cultural forces. While devoting careful attention to harmful aspects of stereotypes, their connections to prejudice and discrimination, and effective strategies for countering them, the volume also examines the positive functions of generalizations in helping people navigate a complex world. Unique features include four chapters addressing the
