Unlike most flat-twin, flat-four and flat-six engines, flat-twelve engines typically use the crankshaft configuration of a 180\u00b0 V engine instead of a boxer engine. Therefore most flat-twelve engines have each pair of pistons sharing a crankpin, instead of the boxer design of each piston having its own crankpin. . Compared with a V12 engine, a flat-twelve has a lower center of gravity, however a ...

Balancing engine components is a little more involved than simply matching piston and conrod weights. What is at stake here is the ratio between the reciprocating bits and the rotating bits. This ratio varies according to the number of cylinders and the configuration, so for example a horizontally opposed six cylinder engine will have a ...
