This book offers an excellent and comprehensive overview on the clinical use of fillers in aesthetic medicine that will assist both novice and advanced practitioners. Based on an evidence-based perspective, the book opens by describing the most common fillers, with information on their characteristics, efficacy and safety. The main part of the book then explains how to use fillers for the most frequent facial indications, such as the glabella, nasolabial folds, infraorbital hollow, nose, cheeks, lips and marionette lines. This new edition also includes chapters on extrafacial indications and treatment planning. All specific aesthetic procedures for the facial and extrafacial areas are described step by step, with the emphasis on a hands-on approach that highlights important do's and don'ts. The book concludes with chapters on how to deal with adverse reactions and how to combine fillers with other aesthetic procedures, ranging from botulinum toxin A to plastic surgery.

The aging process affects every aspect of the body, with the face being one of the first places to show signs. The search for the perfect injectable filler has taken an interesting path with the majority of innovations having been introduced in the last 30 years. The patient-driven demand for safe and effective minimally invasive aesthetic procedures has led to the development of an expanding and competitive market for dermal fillers. The demand for soft tissue augmentation has grown rapidly since its start in 1981 with collagen fillers. Fillers using hyaluronic acid, calcium hydroxyapatite, poly-L-lactic acid, and polymethylmethacrylate provide a wide range of options so that the best cosmetic outcome can be attained. The ability to correct facial rhytides and folds, to augment lips and cheeks, to correct acne scars, and now even to replenish volume loss in the dorsum of the hands is something that many practitioners thought would never be possible. This publication reviews the history of fillers, injection techniques, complications and safety as well as the novel use of fillers and fillers of the future.

One of NPR's Best Books of 2017 The first in-depth social investigation into the development and rising popularity of Botox The American Society for Aesthetic Plastic Surgery estimates there are about two-and-a-half million Botox procedures performed annually, and that number continues to increase. The procedure is used as a preventive measure against aging and a means by which bodies, particularly women's, can be transformed and "improved" through the appearance of youth. But why is Botox so popular, and why is aging such a terrifying concept? Botox Nation draws from engaging, in-depth interviews with Botox users and providers as well as Dana Berkowitz's own experiences receiving the injections. The interviews reveal the personal motivations for using Botox and help unpack how anti-aging practices are conceived by, and resonate with, everyday people. Berkowitz is particularly interested in how Botox is now being targeted to younger women; since Botox is a procedure that must be continually administered to work, the strategic choice to market to younger women, Berkowitz argues, aims to create lifetime consumers. Berkowitz also analyzes magazine articles, advertisements, and even medical documents to consider how narratives of aging are depicted. She employs a critical feminist lens to consider the construction of feminine bodies and selves, and explores the impact of cosmetic medical interventions aimed at maintaining the desired appearance of youth, the culture of preventative medicine, the application of medical procedures to seemingly healthy bodies, and the growth and technological advancement to the anti-aging industry. A captivating and critical story, Botox Nation examines how norms about bodies, gender, and aging are constructed and reproduced on both cultural and individual levels.
