The Functional Independence Measure (FIM) is an 18-item measurement tool that explores an individual's physical, psychological and social function.[1] The tool is used to assess a patient's level of disability as well as change in patient status in response to rehabilitation or medical intervention.[1] [2]

Functional Independence Measure (FIM) - Physiopedia

Functional Independence Measure (FIM): The FIM is an 18-item, clinician-reported scale that assesses function in six areas including self-care, continence, mobility, transfers, communication, and cognition. Each of the 18 items is graded on a scale of 1–7 based on level of independence in that item (1 = total assistance required, 7 = complete independence). 7,8 FIM scores can be measured at admission to and discharge from inpatient rehabilitation.

Functional Independence Measure - an overview ...

FUNCTIONAL INDEPENDENCE MEASURE AND FUNCTIONAL ASSESSMENT MEASURE. Functional Independence Measure. The Functional Independence Measure (FIM) scale assesses physical and cognitive disability. This scale focuses on the burden of care – that is, the level of disability indicating the burden of caring for them. Scoring.
