GD&T represents a significant improvement over traditional dimensioning methods in describing the form, fit, and function of parts. GD&T is considered to be a mathematical language that is very precise. It describes each work piece in three “zones of tolerance” that are then described relative to the Cartesian coordinate system.

• Use the same type of coordinate dimensioning system on the entire drawing. • Continuity of profile is necessary for CADD. Clearly define contour changes at the change or point of tangency. Define at least four points along an irregular profile. • Circular hole patterns may be defined with polar coordinate dimensioning.
