To many people, a wheel loader is called a PayLoader, thanks to the dominance of the classic rubber-tired, hydraulic front-end loader first developed by the Frank G. Hough company in 1944. When International Harvester acquired Hough and combined it with its struggling construction equipment division in 1974, PayLine was born, with the PayLoader as its signature machine. This book tells the story of PayLine, which marked the high point of International Harvester's foray into construction equipment. Oscar H. Will III chronicles the company's early efforts, its success with machines ranging from the PayLoader to the PayHauler, and its expansion right up to its sale to Dresser Industries in 1982. With attention to each particular model, including history, specifications, market position, and color photographs of these mighty machines at work, this book is a fitting tribute to International Harvester's giants in the earth, and a critical chapter in the story of American industry.

The first axial flow combine transformed the industry and was hailed as the most significant piece of farm equipment built in the 20th century. The axial flow used advanced technology to process crops faster and more efficiently than anything else on the market. The axial flow started with research done by a rogue Swedish engineer in the 1950s, was continued in secret by a group of dedicated engineers from East Moline, Illinois, who did their work in a top-secret garage that only a select few were allowed to enter. The book tells the story of how extensive research and development allowed IH to build a new machine that took the market by storm. Done with dozens of interviews of engineers, salespeople, and customers, the book captures the behind the scenes drama and the cloak and dagger encounters with rival companies personnel and machines. The dramatic text is accompanied by more than 300 archival images, concept drawings, sketches, and new photography of the machines and men at work today.
