New York Times Bestseller. "A superb book. . . . [Lewis] makes Silicon Valley as thrilling and intelligible as he made Wall Street in his best-selling Liar's Poker."—Time In the weird glow of the dying millennium, Michael Lewis set out on a safari through Silicon Valley to find the world's most important technology entrepreneur. He found this in Jim Clark, a man whose achievements include the founding of three separate billion-dollar companies. Lewis also found much more, and the result—the best-selling book The New New Thing—is an ingeniously conceived history of the Internet revolution.

"Brilliant. . . . Lewis has given us a spectacular account of two great men who faced up to uncertainty and the limits of human reason."—William Easterly, Wall Street Journal Forty years ago, Israeli psychologists Daniel Kahneman and Amos Tversky wrote a series of breathtakingly original papers that invented the field of behavioral economics. One of the greatest partnerships in the history of science, Kahneman and Tversky's extraordinary friendship incited a revolution in Big Data studies, advanced evidence-based medicine, led to a new approach to government regulation, and made much of Michael Lewis's own work possible. In The Undoing Project, Lewis shows how their Nobel Prize-winning theory of the mind altered our perception of reality.

America will remain the world's only superpower for the foreseeable future. But what sort of superpower? What role should America play in the world? What role do you want America to play? Ian Bremmer argues that Washington's directionless foreign policy has become prohibitively expensive and increasingly dangerous. Since the end of the Cold War, U.S. policymakers have stumbled from crisis to crisis in Afghanistan, Iraq, Iran, Libya, Syria, and Ukraine without a clear strategy. Ordinary Americans too often base their foreign policy choices on allegiance or opposition to the party in power. We can no longer afford this complacency, especially now that both parties are deeply divided about America's role in the world. The next presidential election could easily pit an interventionist Democrat against an isolationist Republican—or the exact opposite. As 2016 rapidly approaches, Bremmer urges every American to think more deeply about what sort of country America should be and how it should use its superpower status. He explores three options: Independent America asserts that it's time for America to declare independence from the responsibility to solve other people's problems. Instead, Americans should lead by example—in part, by investing in the country's vast untapped potential. Moneyball America acknowledges that Washington can't meet every international challenge. With a clear-eyed assessment of U.S. strengths and limitations, we must look beyond empty arguments over exceptionalism and American values. The priorities must be to focus on opportunities and to defend U.S. interests where they're threatened. Indispensable America argues that only America can defend the values on which global stability increasingly depends. In today's interdependent, hyperconnected world, a turn inward would undermine America's own security and prosperity. We will never live in a stable world while others are denied their most basic freedoms—from China to Russia to the Middle East and beyond. There are sound arguments for and against each of these choices, but we must choose. Washington can no longer improvise a foreign policy without a lasting commitment to a coherent strategy. As Bremmer notes, "When I began writing this book, I didn't know which of these three choices I would favor. It's easy to be swayed by pundits and politicians with a story to sell or an ax to grind. My attempt to make the most honest and forceful case I could make for each of these three arguments helped me understand what I believe and why I believe it. I hope it will do the same for you. I don't ask you to agree with me. I ask only that you choose."

Summary, Analysis & Review of Michael Lewis's The Undoing Project by Instaread Preview: The Undoing Project: A Friendship that Changed Our Minds explores the relationship and psychological theories of two Israeli academics, Daniel Kahneman and Amos Tversky, whose ideas about human judgment and decision-making established the field of behavioral economics. The two men's collaborative work began with an audacious premise: that humans are not rational decision-makers. Rational decision-making was the cornerstone of both the psychology of decision-making and the field of economics in the 1970s, but Kahneman and Tversky asserted that people's judgment was swayed by their emotions, not their intellects. They tested this theory in a variety of ways, which led them to co-write a series of influential papers about judgment and how decisions are made. The sheer force of these concepts was such that, although they ran contrary to conventional wisdom, people instantly comprehended their truth. They soon became academic stars, although Tversky's accolades came much faster.. PLEASE NOTE: This is a Summary, Analysis & Review of the book and NOT the original book. "When Sports Illustrated declared on the cover of a June 2014 issue that the Houston Astros would win the World Series in 2017, people thought Ben Reiter, the article's author, was crazy. The Astros were the worst baseball team in half a century, but they were more than just bad. They were an embarrassment, a club that didn't even appear to be trying to win. The cover story, combined with the specificity of Reiter's claim, met instant and nearly universal derision. But three years later, the critics were proved improbably, astonishingly wrong. How had Reiter predicted it so accurately? And, more important, how had the Astros pulled off the impossible?"--
