The transition to adulthood is a complex process, and college is pivotal to this experience. The Science of College aids entering college students—and the people who support them—in navigating college successfully, with up-to-date recommendations based upon real student situations, sound social science research, and the collective experiences of faculty, lecturers, advisors, and student support staff. The stories captured in this book highlight how the challenges that college students encounter vary in important ways based on demographics and social backgrounds. Despite these varied backgrounds, all students are more likely to have successful college experiences if they invest in their communities. Universities have many resources available, but as this book will show, students need to learn when to access which resources and how best to engage with people serving students. This includes having a better awareness of the different roles held by university faculty and staff, and navigating who to go to for what, based upon understanding their distinct sets of expertise and approaches to support. There is no single template for student success. Yet, this book highlights common issues that many students face and provides science-based advice for how to navigate college. Each topic covered is geared towards the life stage that most college students are in: emerging adulthood. In addition to the student-focused chapters, the book includes appendixes with activities for students, tips for parents, and methods information for faculty. Supplemental website materials suggest classroom activities for instructors who adopt this book within first-year seminars and general education courses.

Navigating the Maze: How Science and Technology Policies Shape America and the World offers a captivating deep dive into the inner workings of the world of public policy. Written by prominent science advocate and renowned physics researcher and educator, Michael S. Lubell, this valuable book provides insights and real-world examples for anyone looking to understand how policy works in reality: for students, scientists, and the public. Well-organized and featuring a compelling historical narrative, this unique resource will enable researchers, educators, elected officials, industrialists, financial managers, science lobbyists, and readers in general to easily navigate the complex world of science and technology (S&T) policy. As science communication and STEM policy occupy rapidly growing areas of interest and provide important career paths, this book provides invaluable insights into the public policy arena, as well as lessons for effective science advocacy. Presents compelling narratives about Climate Change, the Internet, the Human Genome, the BRAIN Initiative, the Manhattan Project, the Science Stimulus, the origin of the National Institutes of Health and the National Science Foundation, and more. Provides insights into the future of S&T through a 225-year American policy retrospective, highlighting impacts on health and medicine, STEM education, economic growth, energy, defense, innovation, and industrial competitiveness. Illuminates the role of S&T on the global stage, from diplomatic engagement to military intervention and from scientific collaboration to technological competition.

This co-edited book provides doctoral candidates with a practical, cross-discipline handbook for successfully navigating the doctoral process – from initial program selection to the final dissertation defense and preparing for the faculty interview. Invited chapters from established higher education experts cover topics ranging from university and program selection, preparing for comprehensive exams and dissertation research, self-care and self-management strategies, and recommendations for maintaining personal and professional support systems. Each chapter includes strategies for success and practical tips, including how to create a study guide for the comprehensive examination, how to create a professional support group, how to talk to your family about the doctoral process, how to select and work with a chair and committee, how to identify an appropriate research design, how to navigate the IRB process, and how to master the research and writing process.
