With over 350 Single Best Answer questions and many Extended Matching Questions, Oxford Assess and Progress: Clinical Specialties provides top-quality revision material on the core specialties for readers looking for exam success.

Using state-of-the-art MRI images, this book illustrates radiological findings in the abdomen and pelvis in a case presentation format. Cases presented in this book include common and uncommon diseases of nearly every organ system of the abdomen and pelvis. Each case succinctly discusses the relevant imaging findings, differential diagnosis, and potential imaging and diagnostic pitfalls. Many cases also include discussion of MRI technique, with illustration of some common artifacts. For radiology residents and fellows, this book will be a valuable study tool and reference; fourth-year residents should find this book especially helpful when studying for oral boards. Practicing radiologists should find this a useful quick review of state-of-the-art body MRI.

"Incorporating Progress Monitoring and Outcome Assessment into Counseling and Psychotherapy helps clinicians, students, and researchers learn how to employ and interpret PMOA measures"--

This book focuses on the life and work of Nathan Zuntz (1847-1920), a German physiologist, who made significant contributions to high altitude physiology and aviation medicine. He achieved fame for his invention of the Zuntz-Geppert respiratory apparatus in 1886 and the first treadmill (Laufband) in 1889. He also invented an X-ray apparatus to observe cardiac changes during exercise and constructed a climate chamber to study exercise under varying and sometimes extreme climates. \* Focuses on Zuntz's contribution to high altitude physiology and aviation medicine

Taking the reader from an understanding of the basic mechanisms of heart failure through to an appreciation of the complexities of heart failure management and the remarkable improvements possible with good treatment, the Oxford Textbook of Heart Failure 2e covers all aspects necessary to manage a patient with heart failure. In full colour throughout, containing over 300 illustrations, and supported by detailed referencing from the huge evidence base that has developed over the last two decades, the textbook also includes extensive chapters on common co-morbidities. The new edition has been completely updated in line with new British and European Guidelines and contains new chapters on; Natriuretic Peptides and Novel Biomarkers in Heart Failure, The Future of Heart Failure, and Regenerative Therapies. Essential reading for consultant cardiologists and those in training, general physicians and those caring of the elderly, cardiothoracic surgeons, primary care doctors, pharmacists, and specialist nurses.

Emphasising the multi-disciplinary nature of palliative care, the fourth edition of this text also looks at the individual professional roles that contribute to the best-quality palliative care.

A union list of serials commencing publication after Dec. 31, 1949.

"It is so important to advocate for things that may not always seem possible. Getting to work with patients/families at the end of their life is the ultimate honor." - Lauren G Markham, MSW, LCSW, APHSW-C  
"In this work, one witnesses both depths of human suffering and heights of human transcendence that can inspire both awe and fear. At those times, I have found that surrendering my need to be "an expert" and instead, allow myself to simply be a "human" is the wisest action." - Kerry Irish, LCSW, OSW-C, FAOSW"--

Clinical neurophysiologic testing plays a critical role as a complement to the clinical assessment in patients who are being evaluated for a variety of neurologic symptoms. Many different techniques and methods of assessment can be used to evaluate the function of the nervous system, including electroencephalography, electromyography, evoked potentials, movement disorder studies, and sleep studies.

An accurate understanding of the role of these tests and reliable technical performance and interpretation of these studies is critical in clinical practice. This new edition in the Contemporary Neurology Series remains an essential resource for physicians and technologists learning or utilizing clinical neurophysiology in their training or practice. This fifth edition updates the basic concepts underlying each of the techniques used in clinical neurophysiology and provides detailed descriptions of the methods, findings, studies, and value of the wide range of electrophysiologic testing available for patients with epilepsy and spells, neuromuscular diseases, movement disorders, demyelinating diseases, sleep disorders, autonomic disorders, and those undergoing orthopaedic and neurosurgical procedures in the operative setting. The role of each type of study, the interpretation of findings, and the application of the studies to different types of clinical problems are detailed throughout the text. It is a practical textbook for neurologists, physiatrists and clinical neurophysiologists in clinical or research practice or in training.
