The American Psychiatric Publishing Textbook of Geriatric Psychiatry is an indispensable resource for psychiatric clinicians and trainees charged with assessing, diagnosing, and treating mental disorders in our nation's burgeoning population of older adults, as well as the nurses and other professionals who provide critically important care day to day. Building on the prodigious strengths of previous editions, this revision is the most current, comprehensive, and systematic textbook of geriatric psychiatry available today, and the only one that is DSM-5® concordant. The text's organization is user-friendly and practical, with sections addressing the basic science of geriatric psychiatry, the diagnostic interview in late life, psychiatric disorders in late life, treatment, and special topics. In addition, an array of useful features are included: The new DSM-5 structure and classifications have been integrated into every chapter, ensuring that readers understand how the changes impact diagnosis and patient care. Not only do the authors provide up-to-date information on psychiatric disorders, they also contextualize that information for the geriatric population, presenting the latest thinking on the phenomenology, diagnosis, and assessment of late-life mental disorders such as dementia and other neurocognitive disorders, mood disorders, anxiety disorders, and circadian rhythm disorders. All treatment sections have been thoroughly updated to incorporate the most recent knowledge and research findings on psychotherapeutic, psychopharmacological, and other somatic treatments. The book offers an impressive set of graphical and illustrative features to help the reader comprehend and retain the material, including outlines, bulleted key points, and tables, as well as lists of essential readings to deepen understanding of complex topics. Widely recognized as the standard in its field, The American Psychiatric Publishing Textbook of Geriatric Psychiatry serves a critical need for clinicians challenged to meet the mental health needs of an aging population.

Organ regeneration, once unknown in adult mammals, is at the threshold of maturity as a clinical method for restoration of organ function in humans. Several laboratories around the world are engaged in the development of new tools such as stem cells and biologically active scaffolds. Others are taking fresh looks at well-known clinical problems of replacement of a large variety of organs: Bone, skin, the spinal cord, peripheral nerves, articular cartilage, the conjunctiva, heart valves and urologic organs. Still other investigators are working out the mechanistic pathways of regeneration and the theoretical implications of growing back organs in an adult. The time has come to present a collection of these efforts from leading practitioners in the field of organ regeneration.

This new fourth edition of the Nutrition and Diet Therapy Reference Dictionary covers all aspects of nutrition, including assessment of drug-nutrient interactions, laboratory interpretations, enteral and parenteral nutrition support, community and public health nutrition programs, nutrition throughout the life cycle, and such topics as nutrition and the immune system, nutrition labeling, chemical dependency, AIDS, and organ transplantation. Special features of the Dictionary are entries on 130 different diets (listed under D); nutrition therapy for more than 350 disorders, including inborn errors of metabolism; 145 drugs and their effects on nutrition; and more than 150 nutritional products with their main uses and composition. Of particular importance are topics of public health concerns for the 1990s and the year 2000, and dietary recommendations for prevention of major degenerative diseases such as obesity, coronary heart disease, hypertension, diabetes mellitus, and cancer. With more than 3000 carefully selected entries, the new Fourth Edition includes 380 new terms and more than 600 revised and expanded definitions. In choosing the words to be entered and defined, the authors used as their criterion the frequency of use or importance of a term in relation to nutrition. Definitions are cross-referenced to other word entries and the materials found in the Appendix to provide further details and information. All practitioners in the fields of nutrition and dietetics, as well as educators, students, and others interested in nutrition will find this handy desk reference particularly useful. It is easy-to-use and provides instant access to nutrition information.

The question of the social treatment of the body and its transformations emerges in relation to issues of varying types (economic, therapeutic, ideological, cultural, aesthetic, commercial, technical). This book examines the various ways of managing bodily symptoms or transformations and the social stakes and systems of knowledge which relate to them, both on the medical and social level. The contributions provide analyses that concern a broad range of countries. Through the themes it tackles and the subjects it examines, this book reveals both the universal nature of the questions it asks, and the evolution of the objects and approaches of anthropology itself.

In this revolutionary treatise, J W Armstrong puts the compelling case that all diseases (except those caused by traumatism or structural disorders) can be cured by one simple means: urine therapy. The therapy is an entirely natural treatment, a drugless system of healing that treats the body as a whole. Moreover, the only ingredient needed is a substance manufactured in the body itself, rich in mineral salts, hormones and other vital substances, namely human urine. It may seem strange to take back into the body something that the body is apparently discarding. Yet the theory is similar to the natural practice of organic composting. Fallen leaves, when dug back into the soil, provide valuable mineral salts to nourish new plant life. The same principle holds true for the human body.
